Skills/Experience

Testing applications in Windows/.NET environment

Upgrading/migrating applications from Windows 03 to 08

Converting applications in a .NET 2.0 environment to .NET 4.0

Developing documentation

Responsibility

Testing-

Testing reports, web pages, inbound files that trigger processes, contents of outbound files, nightly batch jobs and Tidal (enterprise Job Server) managed scheduled and file event jobs

Testing methods include comparing the results of the above on a migrated Sales Audit & Loss Prevention server (Focus) against the current production server

Testing will also include generating test scripts and to test remediated code required for applications that did not migrate to the new Focus server

Generate Oracle SQL as required to support testing and validation efforts

Migration Assistance-

Migrate .Net 2.0 to 4.0 executables by compiling the code, noting error conditions and working with a developer to remediate any issues

Set up scheduled and event driven jobs in Tidal in order to retire some VB Scripts

Work with in-house and off-shore developers for any required code remediation and code upgrades

Documentation-

By reading .Net and ASP code and report functionality discovery, document business logic and functionality for reports

Document test cases and defects in Rational

Source Code Inventory and storage-

Conduct an inventory of source code in Production and reconcile it against code in Team Foundation Server (TFS)

Copy any missing or outdated source to TFS
